

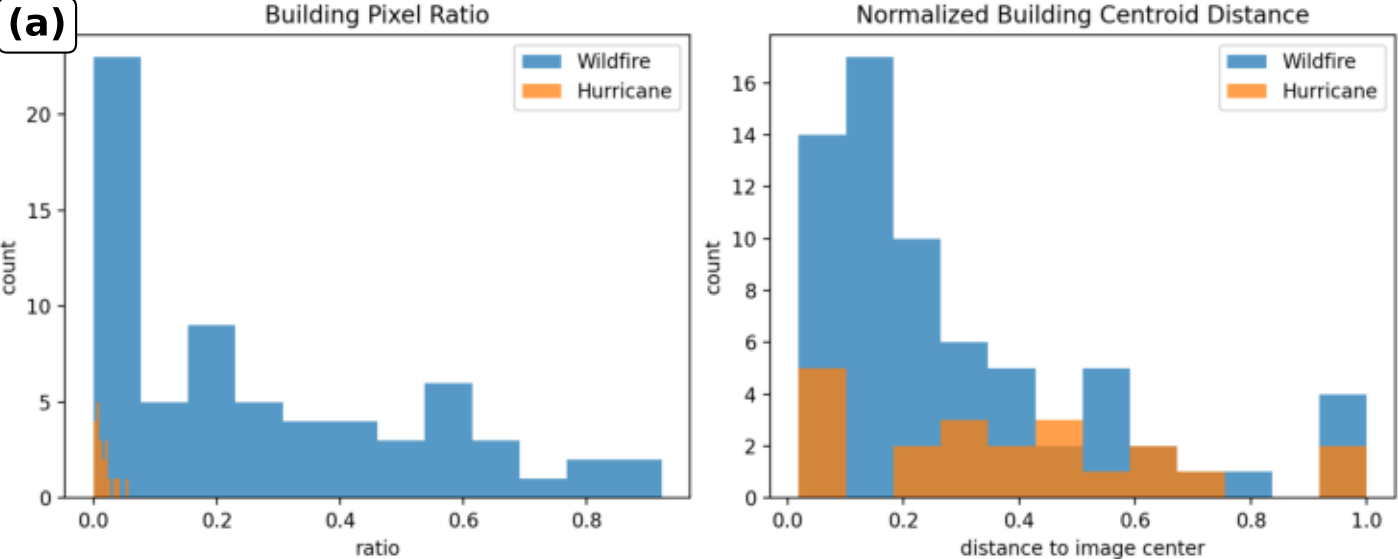

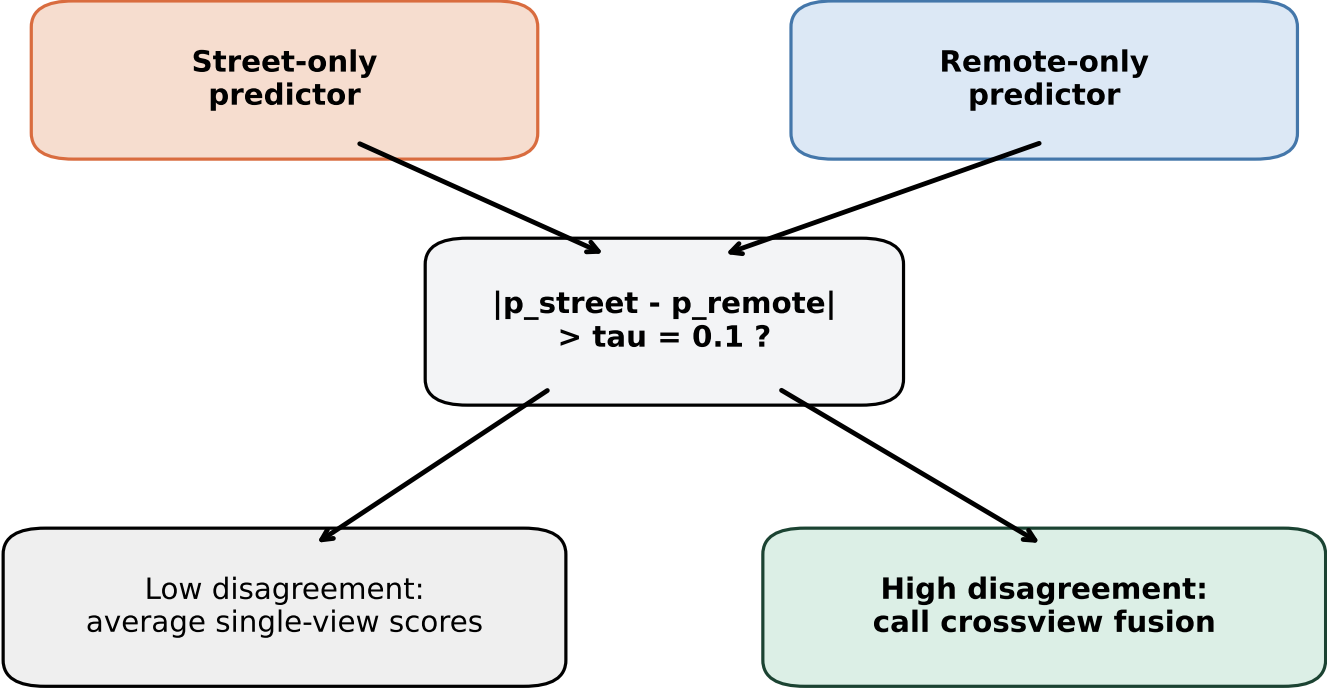

Figure 1. Cross-view disaster triage is conflict-aware and regime-aware.

Wildfire images are building-centric; hurricane images are panoramic and environment-dominant.

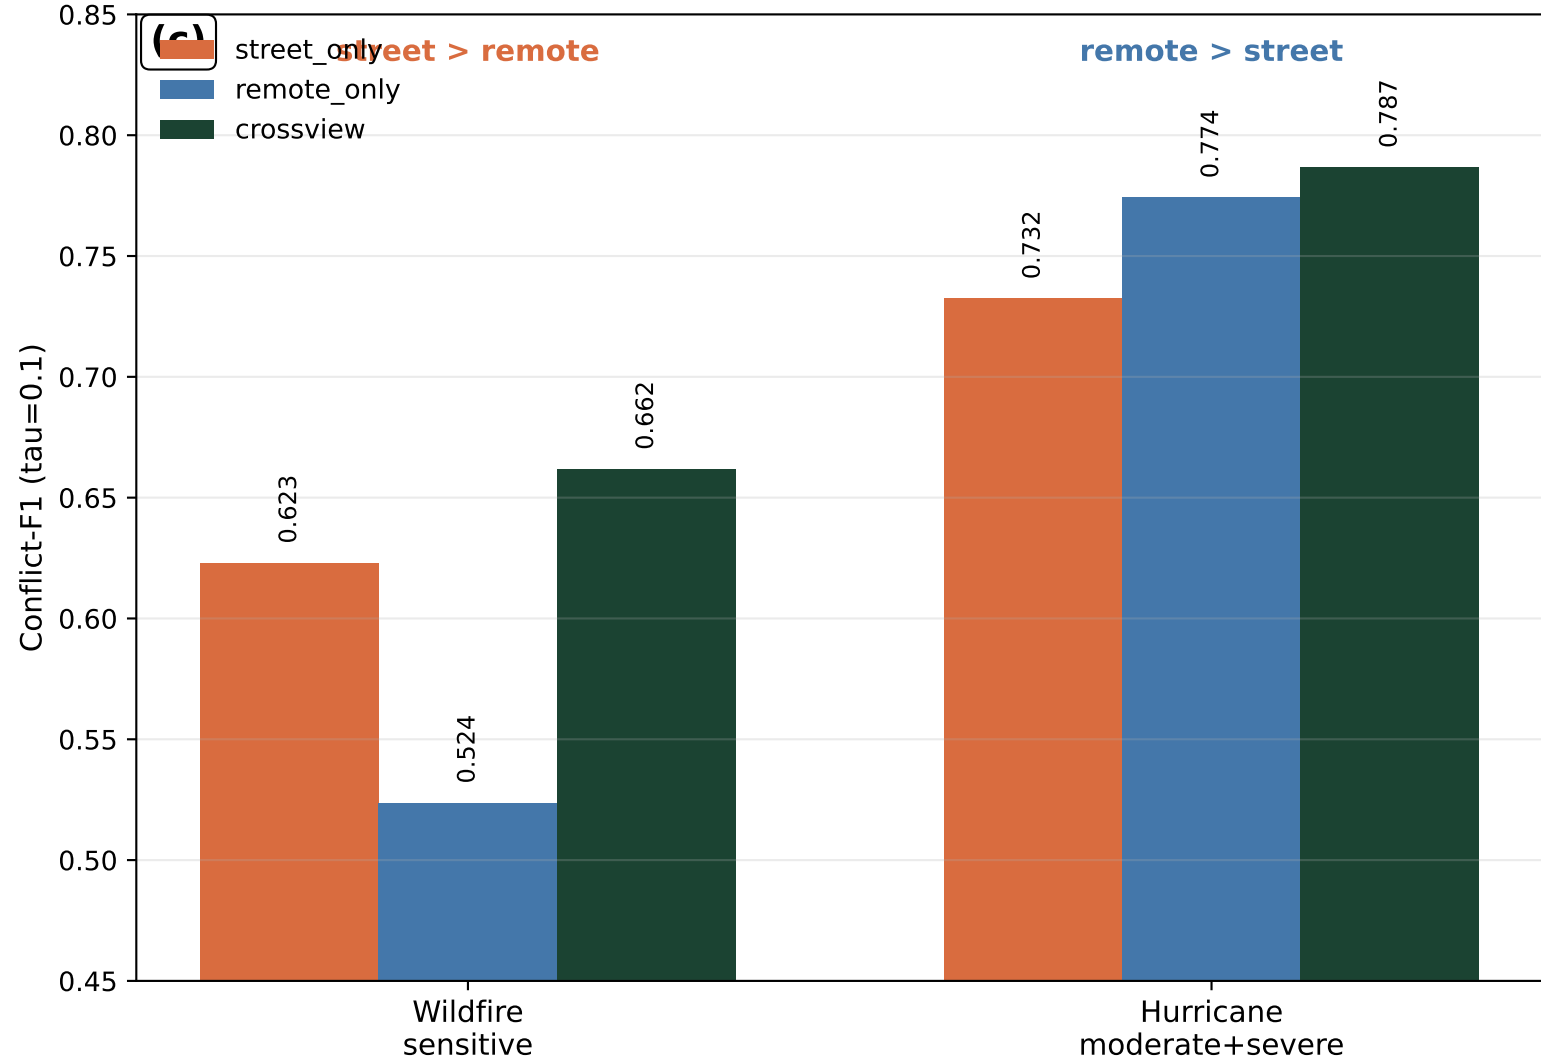

(b)

Conflict-aware framing

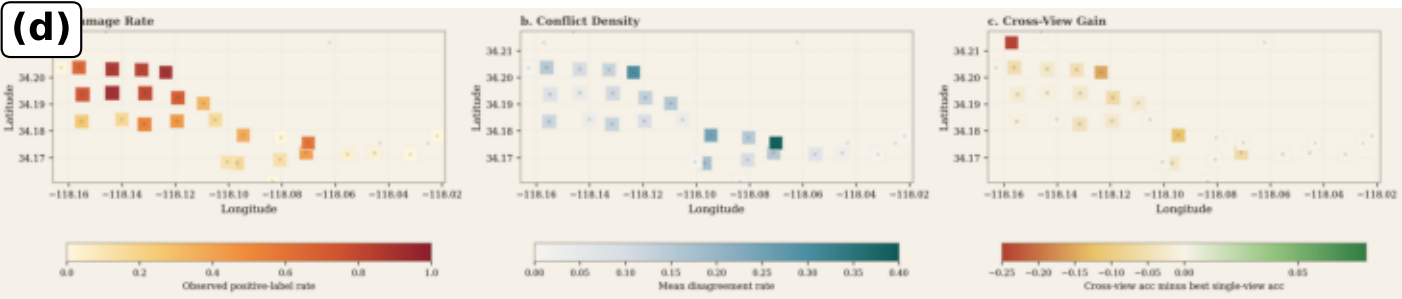

Average F1 hides the cases where fusion matters most.

View Dominance Switching

Spatial Consequence

Wildfire conflict density tracks tile-level damage rate (Spearman $r = 0.512$, $p = 0.0063$).
